

Now that you're living in the home of your dreams, have you considered what may be in your home, but just not visible? According to the EPA, indoor air can be up to 2-5 times more polluted than outdoor air. What's more, is that you may be able to save on your heating and cooling bills by simply adding a programmable thermostat or temperature zoning system. Honeywell can offer you some of the simplest ways to make the home of your dreams even better.

# Honeywell Indoor Air Quality Systems

INCREASE YOUR HOME'S COMFORT, ENERGY EFFICIENCY, AND INDOOR AIR QUALITY

## Temperature Control

### Programmable Thermostats —

Did you know that programmable thermostats, which can be automatically programmed to meet certain temperatures at different times, can save you up to 33% on annual heating and cooling bills? From the FocusPRO to the VisionPRO to the new Wireless Comfort Systems, Honeywell has a wide selection of solutions for you to choose from.

### Temperature Zoning Systems —

With a Temperature Zoning System from Honeywell, you won't be heating empty rooms or over-cooling one area in order to cool another. Zoning is a comfortable, energy-efficient way to enjoy the temperature you want in every room. Think of it as controlling your heating and cooling the same way you control your lights.

## Indoor Air Quality Systems

### Whole-House Dehumidification Systems —

Today's tightly built homes are great for insulation value, but that same insulation prevents the exchange of stale indoor air for fresh outdoor air, trapping moisture from cooking, showering and more. From feeling sticky, to window condensation, to musty odors, excessive moisture in the home leads to discomfort and poor indoor air quality.

A Honeywell TrueDRY Dehumidification System combines the best of portable and whole-house dehumidification solutions into an integrated unit with high-capacity moisture removal. The result is an energy-efficient comfort solution that improves the indoor air quality of your home.

### F100 Whole-House Media Air Cleaner —

When installed into your home's heating and cooling system, a Honeywell Whole-House Media Air Cleaner traps and filters airborne particles and contaminants passing through the duct system ensuring cleaner air is distributed to all rooms in your home. Media Air Cleaners are up to 85% more efficient at removing airborne particles than a standard one-inch furnace filter, and maintain high airflow in your heating and cooling system so that it functions at full efficiency.

### F300 Whole-House Electronic Air Cleaner —

Honeywell's F300 Electronic Air Cleaner works to remove up to 99 percent of common airborne allergens and other particles that pass through the system while maintaining outstanding airflow - all while using less electricity than a 40-watt light bulb. The F300 also features a renewable filter, so you won't need to replace your furnace filter each month (or send the dirty ones to landfills). To sum it all up, the F300 is simply the smartest whole-house air cleaner there is.
